

BAMTEC[®] PROCESS OPTIMIZATION

BAMTEC[®] RED is a software to increase productivity in production and on construction sites by pooling small BAMTEC[®] carpets in one bigger carpet. It has no effect on the structural design nor on the original BAMTEC[®] rollout-plan. BAMTEC[®] RED serves in particular to be able to use BAMTEC[®] and its advantages also with projects with many obstructions, which could limit the productivity.

We are also in the process of patenting BAMTEC[®] RED virtually worldwide. Like that we want to enable our estimated BAMTEC[®] partners to offer solutions, that are unique, that helps them to position themselves as the leading reinforcement provider in their market and consequentially strengthens their market position.

The construction industry on the other hand benefits from increased productivity on site and smooth an installation process.

- Up to 25% higher productivity in the production
- Up to 50% smaller storage area
- Up to 50% faster up- and download on the truck
- Up to 50% less storage area needed on the site
- Up to 25% less crane time needed for installation
- Patented solution in most of the world
