

Official Announcement

Foundation Steel exclusive BAMTEC[®] Partner for Ohio/Michigan with world's first BAMTEC[®] Dynamic plant

BAMTEC[®] is delighted to announce the partnership with Foundation Steel from Swanton, OH. This partnership is all the more exciting because Foundation Steel is the first company in the world to choose a BAMTEC[®] Dynamic. That alone proves Foundation Steel's innovative strength. BAMTEC[®] Dynamic can be used to process epoxy-coated or galvanized material.

BAMTEC[®] will be available in Ohio/Michigan in the second half of 2023. Foundation Steel will operate a fully automated BAMTEC[®] Dynamic Twin MMR. Besides being able to process epoxy coated rebar or galvanized material, this plant will allow Foundation Steel to design and produce prefabricated and customized rebar carpets that can process bars from #3 to #11, making it the most flexible solution on the market. Bars up to #6 are automatically processed from coil, resulting in a high degree of material efficiency.

With Foundation Steel we have found an extremely powerful, diverse, and innovative partner. The fact that all disciplines from engineering to installation are offered with a crew of about 200 employees makes Foundation Steel a perfect partner as a one-stop rebar service provider. This guarantees that maximum added value can be created for the customer in terms of time savings, material efficiency and shorter construction times.

We are extremely excited about this partnership. We are already seeing enormous interest from customers in this game-changing solution for the reinforcing steel and concrete construction industry and are looking very much forward to a long-lasting and highly successful relationship with Foundation Steel.

Foundation Steel desires to be the market leader in all aspects of our industry. Implementing Bamtec[®] will allow us to serve our clients and employees to the best of our ability for years to come!

***Danny Dymarkowski, Vice President –
