

## Exclusive New Cooperation: Hierros Paco Reyes brings BAMTEC® to Spain

*BAMTEC® is pleased to announce its partnership with the Spanish company Hierros Paco Reyes. Starting from May 2025, Hierros Paco Reyes will put into service a fully automated BAMTEC® Evolution. This is the first fully automatic BAMTEC® plant in Spain.*

Hierros Paco Reyes, a medium sized company near Seville, was founded 40 years ago by Paco Reyes. Since 2020, Manuel Reyes embodies the second generation of this family business. He leads it with a dynamic and young team that bets on innovation and customer proximity. Honest and direct communication, focus on personalized solutions, and firm and irreplaceable values characterize the company's philosophy.

With BAMTEC® Evolution, Hierros Paco Reyes takes an important step towards automation and increased efficiency in the production processes of its construction clients. BAMTEC®'s innovative reinforcement solution offers a response to the key challenges of the construction industry, such as the shortage of skilled labor and the increasing demands for productivity, precision, and delivery times. As an exclusive partner of BAMTEC®, Hierros Paco Reyes will help construction companies carry out their projects faster, more profitably, and more sustainably.

"We are delighted to work with Hierros Paco Reyes. The commitment of Manuel Reyes and his team to progress and quality fits perfectly with our vision of making the construction sector more efficient," explains BAMTEC®.

This partnership marks the beginning of a new era for BAMTEC® in Southern Europe, characterized by innovation, good cooperation, and a clear mission: to make the processes of the reinforcing steel industry, from production to installation, more efficient and sustainable.

Manuel Reyes adds: ***"The reason for being partners with BAMTEC® for Spain is that we firmly believe that the future of construction is Industrialization. With this solution, we are going to apply the Know-How of the Industry to the rebar sector and thus address the growing problem of specialized labor for rebar that our sector suffers, applying a concrete and productive solution, where specialization becomes a matter for our technical office."***
